EDUCATION

B.Tech, Artificial Intelligence & Data Science - Karpagam College of Engineering | 2023-2027 | CGPA: **9.24**

PROFESSIONAL SUMMARY

AI/ML and full-stack developer with experience building product features, enterprise integrations, and AI-powered workflows using Go, React, and Python. At Adya AI, contributed to pricing and Super Admin modules, LinkedIn and Outlook integrations, and go-to-market campaign automation. Also deliver freelance AI and full-stack projects from requirements through deployment and ongoing enhancements. Project experience spans RAG-based legal intelligence, recruitment automation deployed on campus, IoT-enabled water monitoring, and NLP-driven content filtering.

TECHNICAL SKILLS

Languages	Go, Python, Java, SQL, JavaScript, HTML/CSS
Backend & Web	Node.js, Express.js, Flask, Spring Boot, REST APIs, React, Vite
Integrations	LinkedIn API, Microsoft Outlook / Graph API, OAuth 2.0, Email, WhatsApp campaign workflows
AI/ML & GenAI	LLMs, RAG, LangChain, LangGraph, Agentic AI, Multi-Agent Systems, FAISS, Chroma, Transformers, TensorFlow, Keras, OpenCV
Quality & Delivery	Requirement analysis, test planning, regression testing, debugging, Agile collaboration
MLOps & Cloud	Docker, Apache Kafka, Snowflake, DVC, Jenkins, Git, AWS, AWS Bedrock, Google Cloud Platform
Data & Analytics	MongoDB, PostgreSQL, DynamoDB, Hadoop, Hive, Tableau, Power BI

PROFESSIONAL EXPERIENCE

AI Engineer Intern - Adya AI

- Develop product features using Go, React, and Python, contributing across backend services and frontend interfaces from requirement clarification through implementation, testing, and release.
- Built the Pricing Module end to end across frontend and backend, and developed Super Admin features for platform-wide administration and operational control.
- Implemented LinkedIn and Outlook integrations so customers can connect accounts and use outreach and mailbox workflows directly within the platform.
- Contributed to the RAI Agent, a go-to-market automation system supporting inbound and outbound engagement across Email, LinkedIn, and WhatsApp.
- **Client delivery:** Co-owned LinkedIn campaign delivery for Affinity with a senior engineer and delivered the Outlook integration requested by Tata Tele Services within the committed timeline.
- Supported release quality through requirement clarification, test planning, regression testing, debugging, and defect resolution.

Freelance AI & Full-Stack Developer | May 2026 - Present

- Deliver client projects end to end, from requirement gathering and scope definition through implementation and deployment, followed by continued enhancements to live systems.
- Partner directly with clients to clarify project needs, communicate progress, manage delivery expectations, and resolve implementation issues.

SELECTED PROJECT

RAI Agent - Go-to-Market Campaign Automation | Go, Python, React, LLMs, OAuth 2.0

- Built a unified agent-driven workflow for inbound and outbound go-to-market campaigns across Email, LinkedIn, and WhatsApp, coordinating outreach across channels through a single operating flow.
- Integrated LinkedIn and Outlook through OAuth 2.0 to support workflows on connected client accounts. Delivery included LinkedIn campaign work for Affinity and an Outlook integration for Tata Tele Services.

PROJECTS

AI Contract Assistant - Legal Intelligence System | Python, LLMs, RAG, Vector DB, NLP

- Built a retrieval-augmented assistant that analyses legal contracts and surfaces clauses, risks, and obligations using vector embeddings and semantic search.
- Developed the retrieval pipeline from embedding generation and vector indexing through contextual retrieval to surface relevant insights from unstructured contract text. **Won 1st Prize at the Code 0 Clock Hackathon.**
- Structured retrieval around semantically relevant contract passages so the assistant can return contextual evidence alongside identified clauses, risks, and obligations.

AI-Powered Recruitment Tool | MERN Stack, Python, RAG, NLP, LangChain, Multi-Agent AI

- Built and deployed a full-stack recruitment platform within the college premises, combining a React/Node.js interface with Python-based NLP workflows for resume parsing and candidate screening.
- Implemented semantic candidate-to-role matching and retrieval-augmented evaluation to compare applicant profiles with job requirements, support candidate ranking, and assist interview evaluation.
- Organized the workflow around resume extraction, candidate-to-role comparison, and interview evaluation to support consistent review against role requirements.

AquaSentry Vision - AI Water Quality Monitoring | Python, ML, IoT, Edge Computing

- Designed an IoT-enabled monitoring system combining sensor readings with machine-learning inference to detect and classify water contamination levels in near real time.
- Combined edge processing with digital-twin intelligence to support continuous monitoring and provide timely insight into changes in water quality.
- Related incoming sensor readings to the interpreted water-quality state to help surface changes for timely review.

SentientStream - Mood-Aware AI Content Filtering | Python, NLP, ML, Sentiment Analysis, AWS

- Developed a content-filtering system that uses sentiment analysis and NLP to infer user mood and interaction patterns, adapting recommendations to the detected context.
- Designed context-aware filtering logic intended to encourage healthier digital consumption, with AWS-backed infrastructure supporting deployment.
- Used contextual signals to make content selection more responsive to inferred user state rather than relying only on fixed filtering rules.

Women Empowerment Insights Dashboard | Power BI, Data Analytics, Visualization

- Built an interactive Power BI dashboard analysing global women-empowerment indicators from 2015-2024, including literacy, labour participation, political representation, maternal health, and the gender pay gap.
- Translated multi-indicator datasets into visual comparisons and trend summaries to support data-driven discussion of progress and persistent gaps.
- Grouped indicators into a unified analytical view so viewers can compare changes over time and examine differences across empowerment measures.

ACHIEVEMENTS & LEADERSHIP

- **AI By HER - India AI Impact Summit 2026: Shortlisted among the top 1.5% of teams globally.**
- **Other recognition:** 1st Prize, Code 0 Clock Hackathon; Top 10, Hackceler8 SRM Hackathon; Finalist, Hacknation (OpenAI).
- **Leadership:** Led the AI/ML domain of the Software Club, mentoring students in machine learning, generative AI, and system-oriented development practices. Served as team lead across 50+ hackathons, guiding problem analysis, solution design, and technical execution.
- **Problem solving:** Solved 300+ problems on LeetCode/HackerRank and 100 on NeetCode.
- **Certifications:** NPTEL Elite Silver (IoT, Python for Data Science), AWS Cloud Practitioner (GeeksforGeeks), Salesforce Innovator, and Qlik Business Analyst.
